

Managed DAVx⁵

DEPLOYABLE SYNCHRONIZATION FOR
CONTACTS, CALENDARS AND TASKS ON ANDROID

FOR BUSINESS AND ORGANIZATIONS

What is DAVx⁵

SYNC ON YOUR OWN

DAVx⁵ is an all-in-one sync app that performs two-way-synchronization for contacts, calendars and tasks between a CalDAV/CardDAV service of your choice and your Android devices. Whenever a resource is changed, it will automatically be updated everywhere.

USE ALL THE APPS YOU WANT

Because DAVx⁵ synchronizes data to the common Android storages, it automatically integrates seamlessly with all the apps you want to use on Android. If – for example – your organization prefers a special calendar app, you can use it with DAVx⁵ flawlessly!

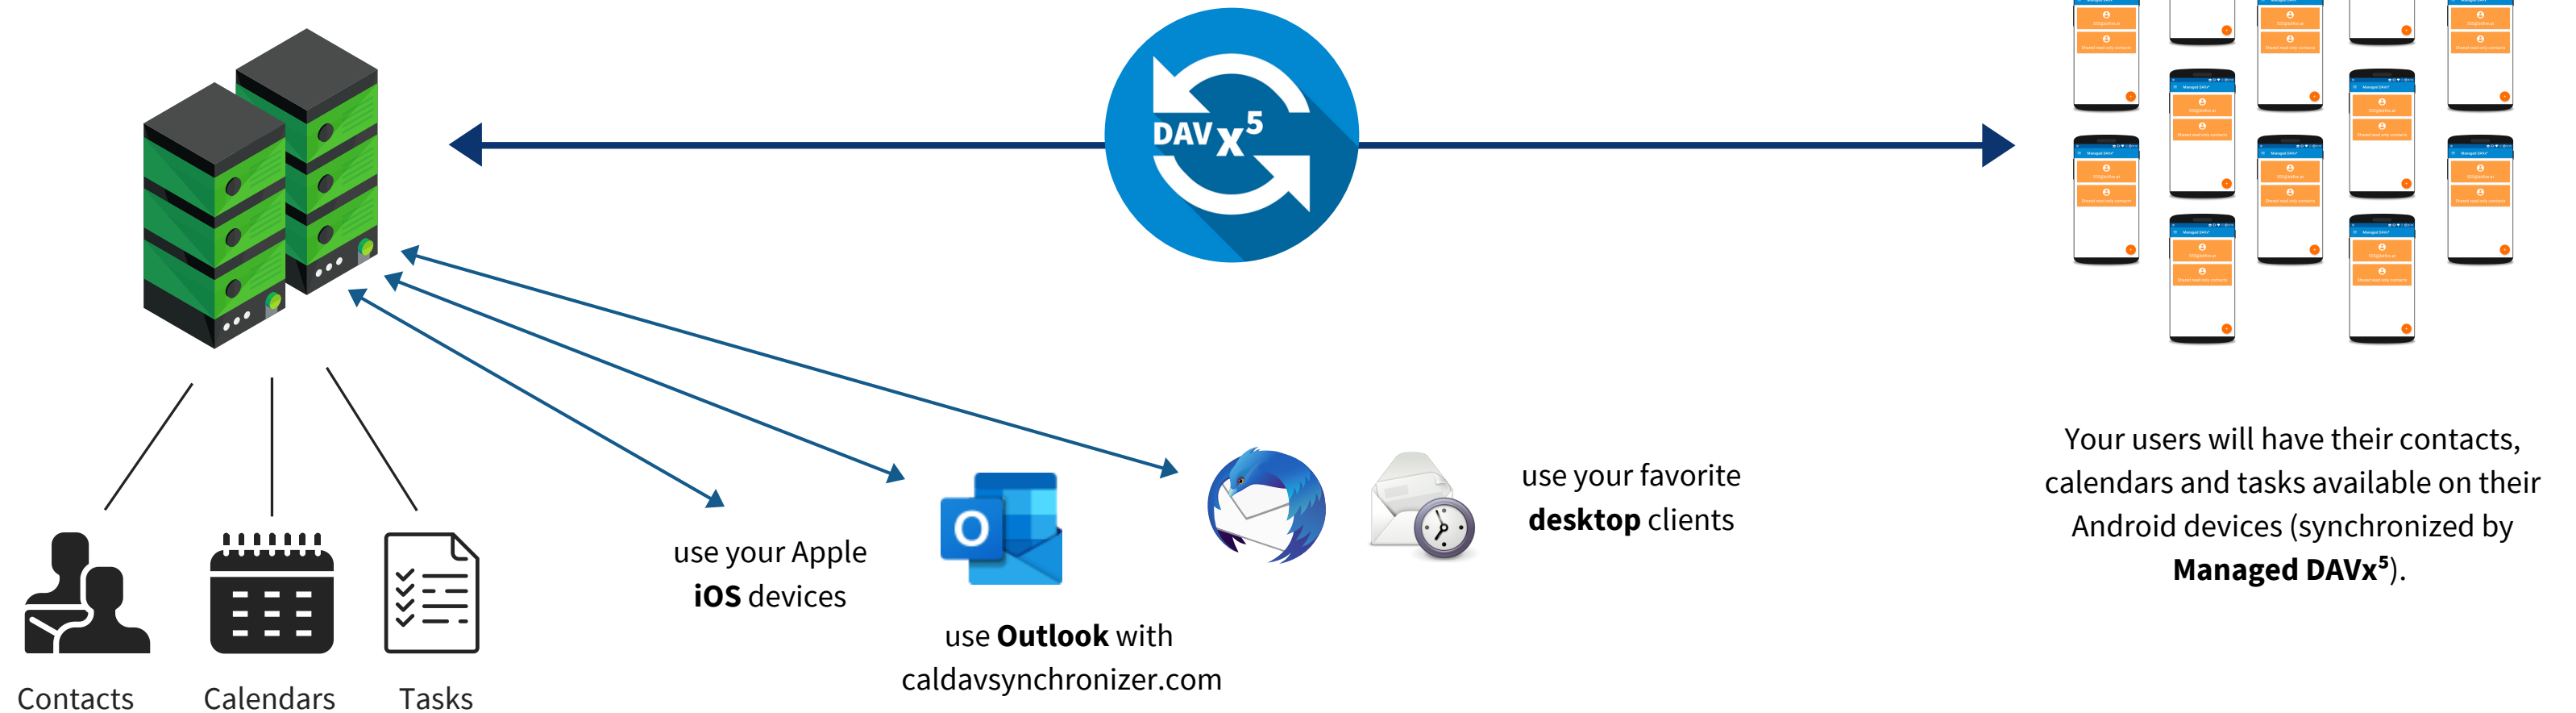

How it works

Platform-independent synchronization in your organization

YOUR OWN CALDAV/CARDDAV
SERVER INFRASTRUCTURE
(MAY BE OUTSOURCED)

GET CALDAV AND CARDDAV TO YOUR ANDROID
DEVICES WITH MANAGED DAVX⁵

Why you need it

SYNCHRONIZATION UNCHAINED

No limitation of resources. Distribute (global) company-wide address books. Share your calendars. Manage appointments for small or large teams. And even more.
You will truly be unchained!

GDPR COMPLIANT

Your employees' data are save within your trusted server infrastructure. No more transmission of data to servers of third parties. And we have zero access to your data, too.

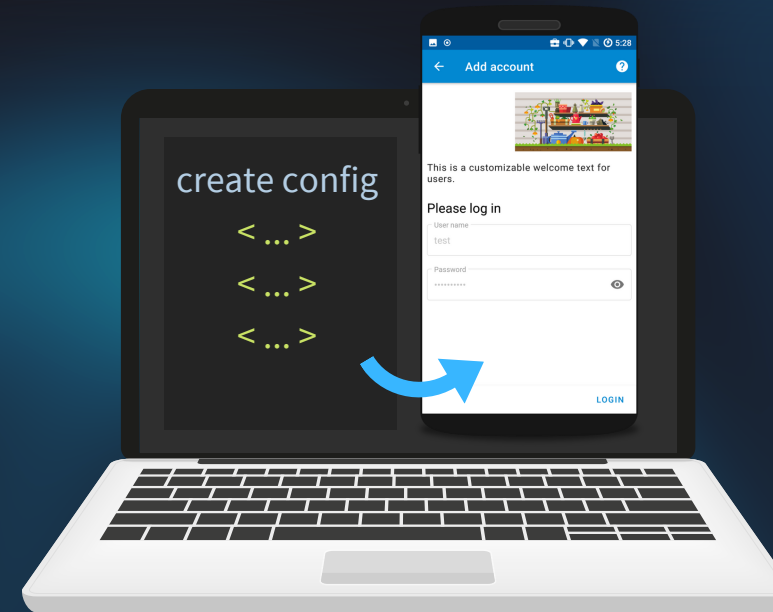

OPEN SOURCE

DAVx⁵ was always intended as and will forever be Open Source Software. No backdoors, no ads, no calling-home "features", no tracking.

1 Configure

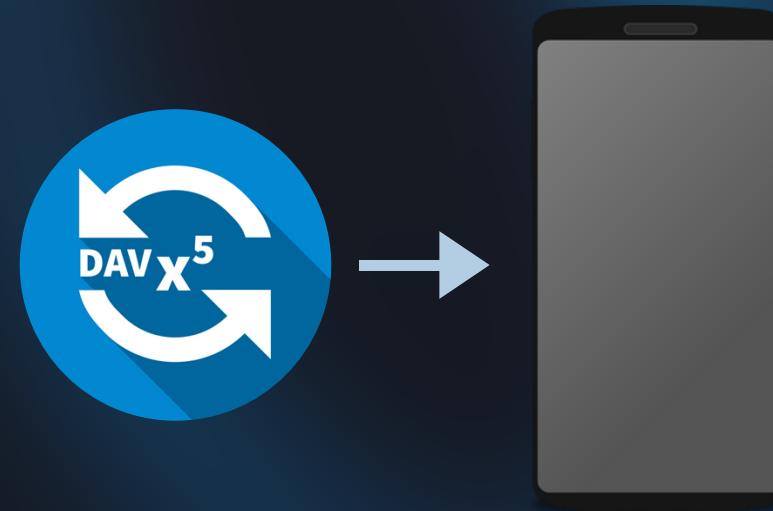

2 Install

3 Stay in sync

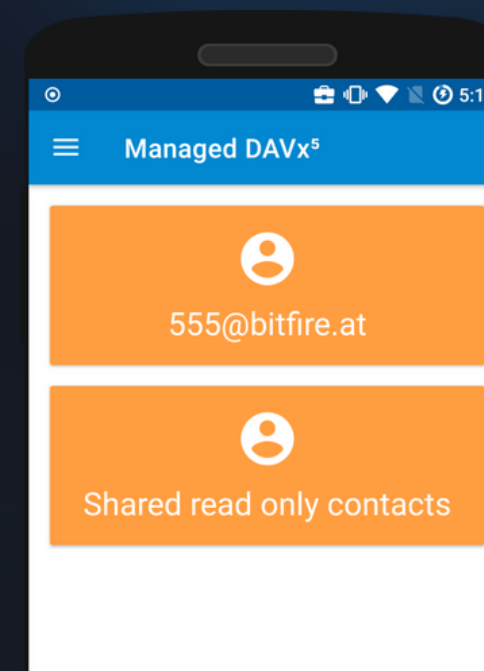

PRE-CONFIGURE TO YOUR NEEDS

Make use of centralized configuration:
Pre-set your server URL, username and passwords or set special text and support info for your users. Pre-configure account settings and much more. Make DAVx⁵ matching your needs.

INSTALL MANAGED DAVX⁵

Install the app from Google Play for Work on the desired devices - alternatively you can get the APK directly from us. You can also install the app manually, of course.

SETUP ONCE AND FORGET

The account setup can be finished with a few simple clicks. After the setup you can select the resources you want. Synchronization will then run silently in the background and you will not even notice it. No user knowledge required!

Managed DAVx⁵ is pre-configurable

AN OVERVIEW OF OPTIONS YOU CAN PRE-SET AND AUTOMATICALLY CUSTOMIZE FOR YOUR USERS

LOGIN AND SETUP

- login_introduction
- login_base_url
- login_user_name
- login_password
- login_lock_credentials
- login_certificate_alias

COMPANY BRANDING

- organization
- logo_url
- support_homepage_url
- support_email_address
- support_phone_number

- max_accounts
- wifi_only
- wifi_only_ssids

CALDAV/CARDDAV SPECIFIC

- contact_group_method
- manage_calendar_colors
- event_colors
- default_alarm

GLOBAL APP SETTINGS

- override_proxy
- override_proxy_host
- override_proxy_port

Detailed descriptions and values can be found in our Managed DAVx⁵ manual:

https://www.davx5.com/manual/managed_davx5.html#configuration-variables

Distribution options

HOW TO GET MANAGED DAVX⁵ TO ALL THE DEVICES

USE AN EMM / MDM (ANDROID FOR WORK)

The easiest and most comfortable way. Connect your devices via the MDM and create the config in a web interface.

OPTION 1 (RECOMMENDED)

OPTION 2

DIRECT FILE CONFIG

Edit the configuration (a .json text file), put it onto a Web host and let users scan the QR code of the URL to load the configuration.

AUTO-LOAD THE CONFIG FROM YOUR NETWORK

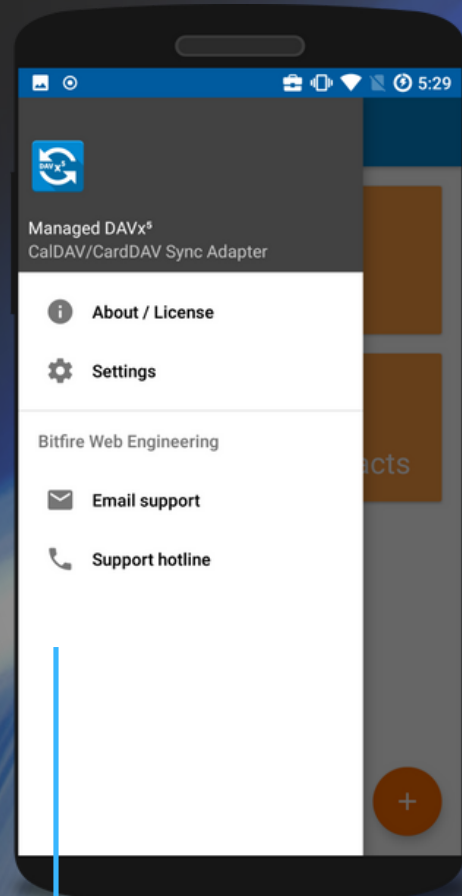

Put the config file onto your network (like the option above) but let Managed DAVx⁵ find it automatically using unicast DNS or Zeroconf (DNS-SD). Users don't have to manually click or scan a link. They can start with the setup right away.

OPTION 3

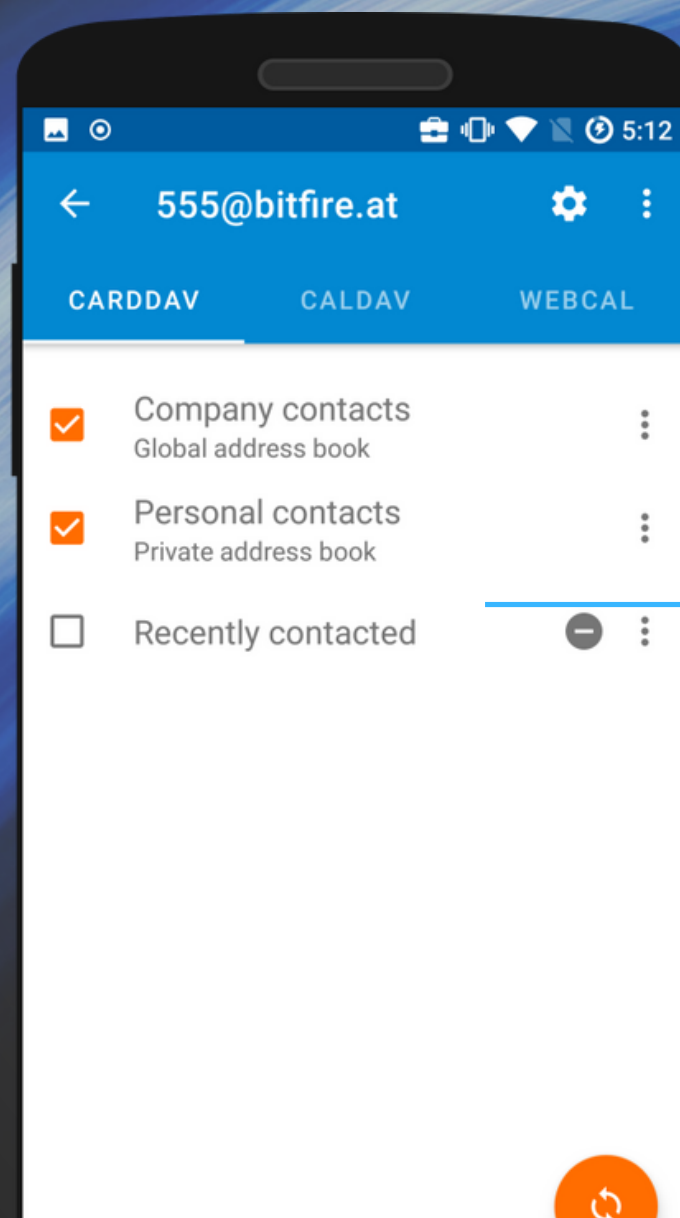

How does it look?

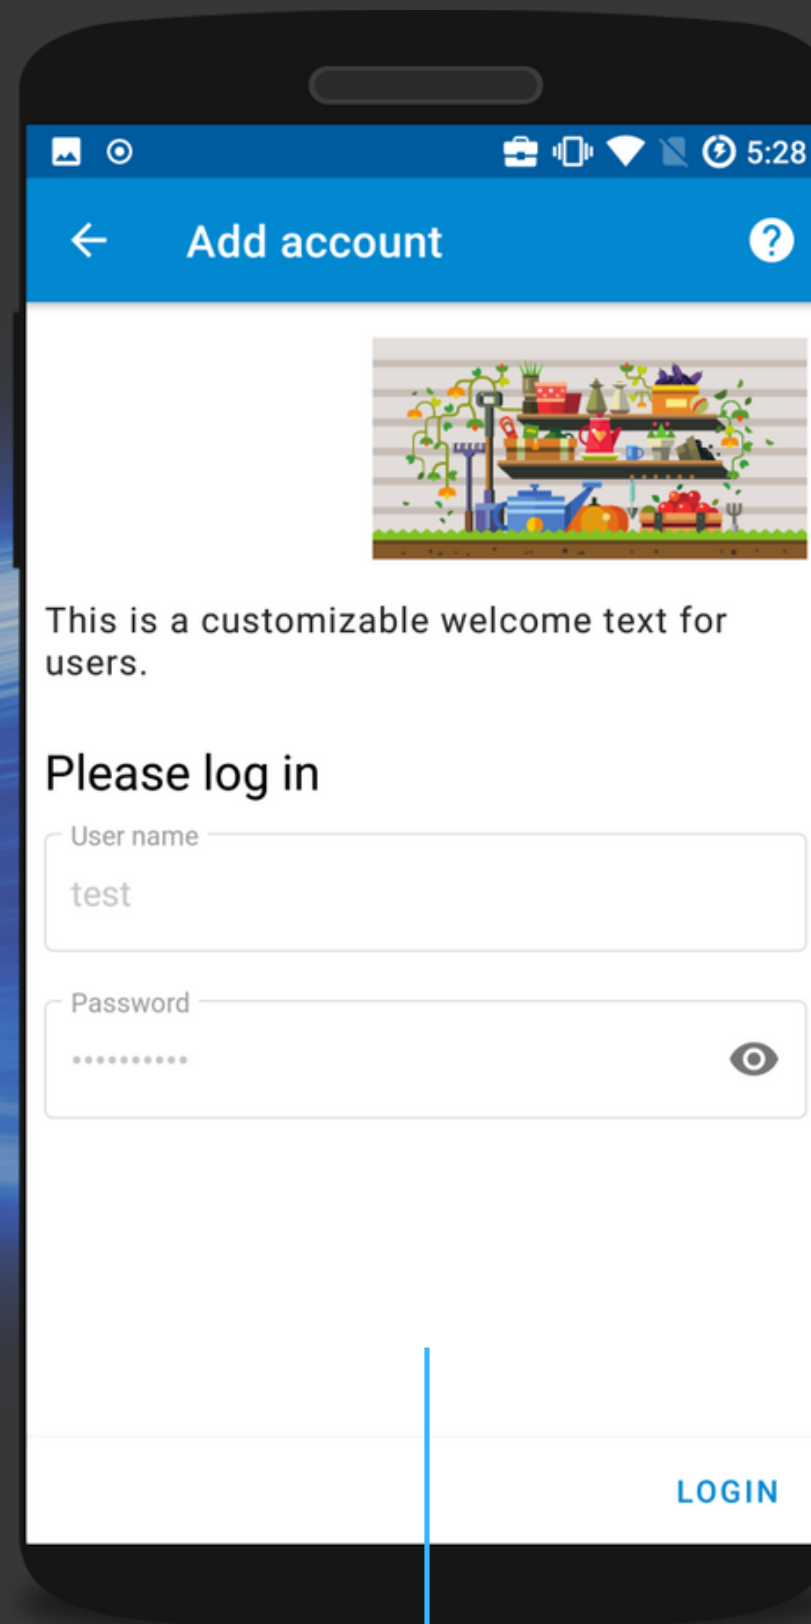

USERS CAN EDIT EVENTS AND CONTACTS IN THEIR FAVORITE APPS

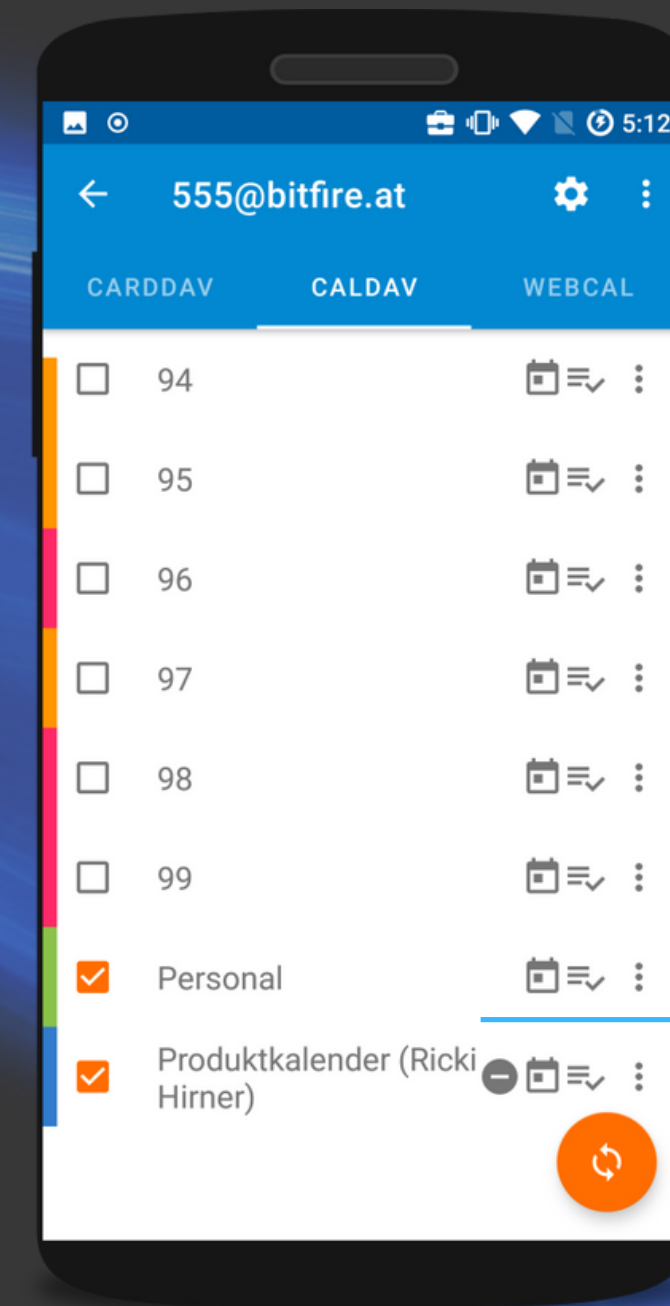

Navigation drawer

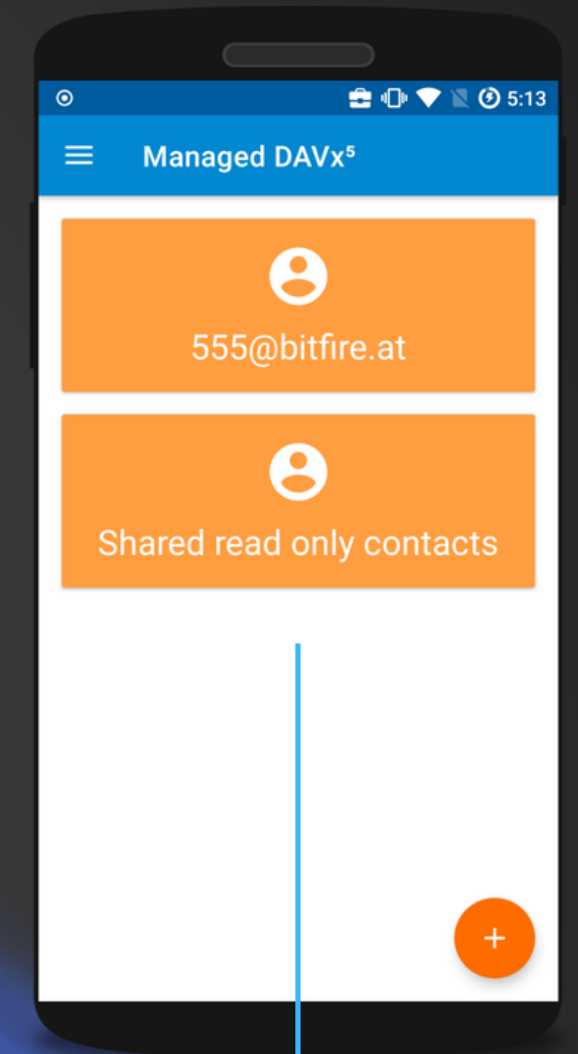

Address book(s) selection view

Customizable Login view for your users

Calendars selection view
